ANIMAL HEALTH CORP.**  
OMAHA, NE 68103 U.S.A.  
U.S. Veterinary Permit No.

# FOOTVAX®

**Administration and Dosage:** Shake contents thoroughly before use.

**Dosage:** 1 mL subcutaneously in the anterior half of the neck. Do not vaccinate within 60 days before slaughter. A second vaccination should be administered not sooner than six (6) weeks and not later than six (6) months following the initial dose. Use entire contents when first opened. Full directions on package insert.

READ ENCLOSED PACKAGE INSERT CAREFULLY BEFORE USE.

**Caution:** Store away from light at not over 45°F or 7°C. Do not freeze. Footvax is an oil adjuvanted vaccine and as such is likely to cause a reaction at the site of injection. As far as possible, avoid injection of dirty or wet sheep. Anaphylactoid reactions may occur following use.

**Antidote:** Epinephrine.

**To the Doctor:** Accidental self-injection with this oil-based product can cause intense vascular spasm which may, for example, result in the loss of a digit. Expert PROMPT surgical attention is required and may necessitate early incision and irrigation of the injected area, especially where there is involvement of muscle, tendon sheaths or joint capsules.
