

Trailer Paddock Kit

A ready-to-go portable package. Includes everything needed to enclose horses for short periods—energizer, battery, leads and ground; 5 step-in posts for corners; 10 insulators; gate handle; 330 ft of IntelliTape; windup reel; 8 tent pegs and a bucket to keep the small parts in one place. (The bucket is also useful for water or grain.)

Trailer Paddock Kit #117801

Optional Items:

Additional paddock..... #117802
(does not include an energizer)
Extra tent pegs.....#200400
Extra FiberRod posts, 4 ft #320400

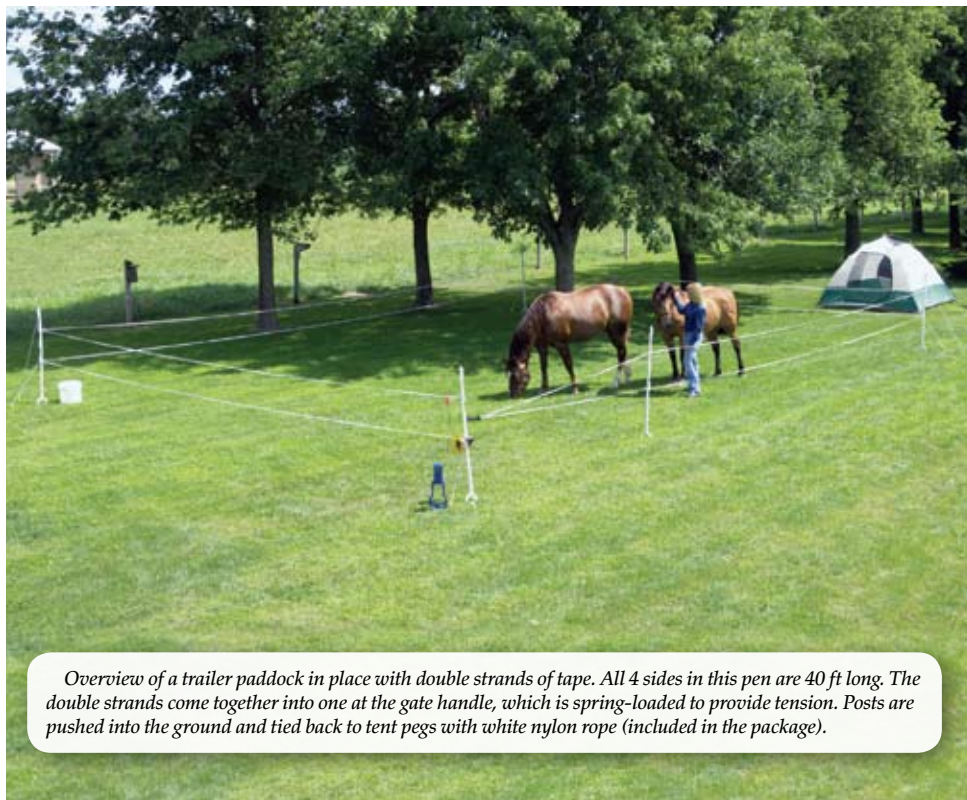

To install

Tools: A hammer to drive the pegs at ea corner.
(If it's missing, innovative folks use a rock!)

Time: 15 minutes.

The tape, when tensioned, will pull all 4 corner posts toward the center of the pen. So when installing the corner posts, tie them back just a bit toward the tent pegs. Then string and tension the tape. The posts are not stiff enough to resist the strain without the extra support of light nonconductive rope secured to the tent pegs (provided in the Trailer Paddock Kit).

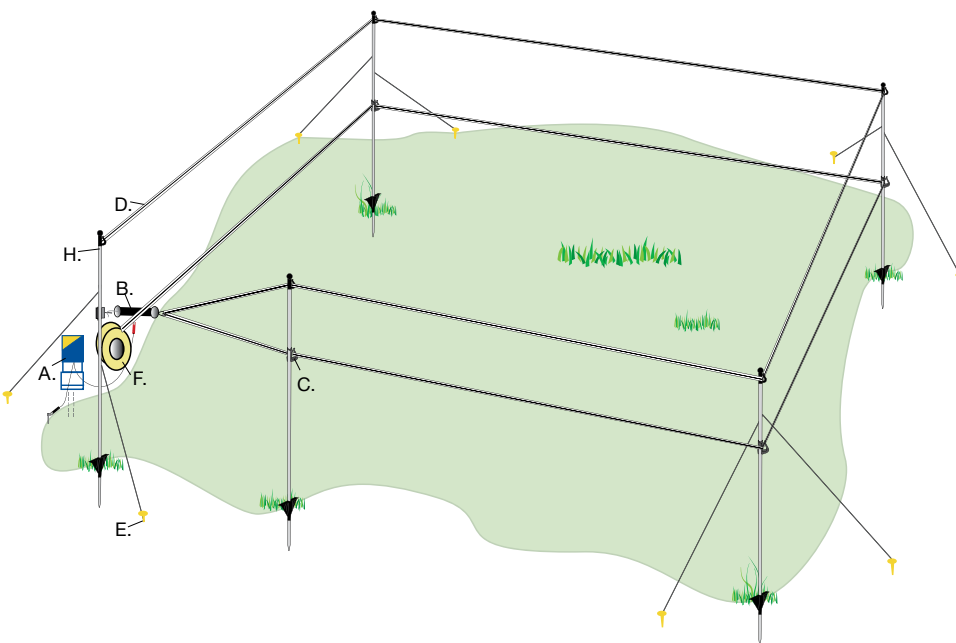

After the tape is in place and tensioned, the tieback ropes to the tent pegs will need to be adjusted to keep the posts vertical. Extra tent pegs are always useful for additional support.

Overview of a trailer paddock in place with double strands of tape. All 4 sides in this pen are 40 ft long. The double strands come together into one at the gate handle, which is spring-loaded to provide tension. Posts are pushed into the ground and tied back to tent pegs with white nylon rope (included in the package).

Trailer Paddock Kit Components

(all of the items shown below come in the paddock kit)

(above) Diagram of a typical (if there is one, because all sites are different) Trailer Paddock Kit layout. The 330 ft of tape provided can create the 2-strand 40 ft x 40 ft (1600 sq ft) paddock shown above, or a 1-strand fence around an 80 ft x 80 ft paddock. (You will need to purchase 4 extra posts if you wish to make the larger paddock.)
