

Galvanized Lightning Choke/Diverter Instructions

- #1 Attach wire to screw at base of steel plate, and then attach to a ground rod, grounded wire or steel T post. (Not the same ground system as the energizer.)
- #2 Nail, screw or wire the combination coil and diverter to wood or steel post using the two holes on the diverter steel plate.
- #3 Connect energizer lead wire to either screw.
- #4 From either screw connect an insulated wire to the fence.
(This diverter is not meant to be used as a splice in the wire.)
