

Installation Instructions for Electrified Gates

Each gate option has its strengths and weaknesses. Electrified gates are inexpensive and much easier to install than steel gates. But they're also much less durable.

Remember these key principles about electrified gates:

1. They are pain barriers. They are not physical barriers. They are not capable of standing up to physical crowding by livestock—not even sheep or goats.
2. Visibility and effectiveness are related. Animals can't avoid gates that they cannot see.

NetGate 3.0

- Installs in minutes
- Low cost
- Easy to use

Our preferred pasture gate for sheep, goats and cattle if animals are never pushed against the gate. If they are, we use welded wire panels.

Why we like this option...

- Keeps goats and sheep in and their predators out.
- Will contain guard dogs.
- Visible against all backgrounds day and night.
- Places no strain on end posts of permanent fence.
- Can be angled out from either gate post in minutes to guide the herd in or out of a field.
- Fits gate openings from 12 to 20 ft. To shorten, carefully roll up the excess net around an end post.
- Installs in minutes.
- Low initial cost.

NetGate™ 3.0

Consists of 20 ft of net, 2 end posts (1 in. diameter PVC posts) and a smaller center post.

Used throughout our farms. Quickly installs and is easy to use. Just clip a PowerLink (sold separately below) to an existing "hot" wire to add or remove "power" to the gate.

- NetGate, 35" x 20', 5 lb..... #340501
- NetGate, 42" x 20', 5 lb..... #340601

PowerLink™ 4.0

For instant in-the-field connections. Easily links to all types of conductors. Length is either 30 or 48 in. long. Stainless steel clips.

- 30", 0.2 lb..... #335500
- 48", 0.2 lb..... #335505

Never use electric gates where animals will crowd against them. Use steel/wood gates if this will occur.

(above) A properly electrified NetGate can keep your guard dogs on the "right" side of the fence.

Attaching and powering the NetGate
 1. Tie the gate to a support post to close the gate.
 2. Use a PowerLink to connect gate to the "circuit."

#111119
 02/2011

Kit includes:
SafeHandle, 25
ft of IntelliTape
SuperWide,
insulated activator
and an insulator.

A. IntelliTape™ SW Gate

The most visible single-strand gate. But less “tidy” to use than a spring gate because the tape does not “shrink” in length when gate is opened.

For steel T posts.....#340200 For steel T posts, (wo tape).....#340220
For wood posts.....#340201 For wood posts, (wo tape).....#340221

Kit includes:
SafeHandle, 25
ft IntelliBraid, an
insulated activator
and an insulator.

C. IntelliBraid Gate

Many prefer this to a standard rope gate (see Premier’s rope gate below).

For steel T posts.....#340801 For wood posts.....#340800

Kit includes:
SafeHandle, 16 ft
Spring Gate, an
insulated activator
and an insulator.

B. Spring Gate

Popular, effective gate. Not visible enough for untrained horses. Insulated polycarbonate handle is very strong and impact-resistant. Galvanized.

For steel T posts.....#340000 For wood posts.....#340010

Kit includes:
SafeHandle, 25
ft EnduraSoft, an
insulated activator
and an insulator.

D. Rope Gate

We prefer this gate over spring & SW IntelliTape gates. It’s more durable and more tolerant of abuse and neglect.

For steel T posts.....#340300 For wood posts.....#340310

E. SafeHandle™

Features:

1. UV stabilized polycarbonate. Less likely to break than polypropylene handles.
2. Internal compression springs instead of expansion springs (prone to stretching).
3. All metal parts stainless steel. Won’t rust.
4. Larger hand grips for a safer hold.

Black is perhaps most durable.

White is most visible against grass.

Amber is most visible against snow, dust and dirt.

F. Wood Post Activator

Insulator and activator for wood posts. To energize, connect live wire from fence to a loop with 2 ft of insulated MaxiShock (not included). SafeHandles hook into either loop.

Wood Post Act., 0.2 lb.....#340130

G. Steel Post Activator

Insulator and activator for steel T posts. Feeds “power” from existing permanent fence to split-bolt joint clamp with 2 ft of insulated MaxiShock (not included).

Steel Post Act., 0.2 lb.....#340120

H. MaxiShock Insulated Cable and Double-Insulated Wire

For connecting activators to the live fence. It’s very flexible and needs no connectors to make a lasting electrical joint.

Insulated Cable, 10'.....#163900
Double-Ins. Wire, per ft.....#164200
Double-Ins. Wire, 165'.....#164201
