

IntelliFence® solutions for... Wildlife Barriers

To Protect...

- Backyards
- Beehives
- Fruit orchards
- Gardens
- Hatcheries
- Rearing ponds
- Silage "tubes"
- Sweet corn
- Tree planting
- Vineyards

(above) Netting in its varied designs is a versatile, easy-to-install barrier against a wide range of wildlife.

The 2 design alternatives...

Netting

- More expensive per ft than multi-strand (60¢ to \$2.76).
- Best solution to keep out small animals such as dogs, rabbits, woodchucks, raccoons, foxes, feral hogs, deer—and ducks, geese and chickens.
- Fast and simple to install. For a typical fence line, 500 ft can be installed in less than an hour.
- Needs no tools, strength or special skills.
- Effectiveness falls fast if fence line is not mowed or sprayed when grass grows up into the lower strands.

Temporary

- VersaNet Plus 9/20/3
- VersaNet Plus 11/30/3
- ElectroNet 9/35/12

Semi-Permanent

- RaccoonNet 4/18/12
- Bear QuikFence 12/35/12
- PermaNet Plus 12/48/3
- VersaNet Plus 12/60/3
- Deer QuikFence 5/60/12
- PermaNet 19/68/3 & 12/68/6

Multi-Strand

- Much lower cost per ft (11¢ to 25¢)—important for long fences. Actual cost is affected by the number and type of strands, post spacing and type of posts.
- Not as effective as netting to fence out raccoons. Moderately effective for feral hogs, deer and wild geese if a proven design is used.
- Because lowest strand is higher above the soil, multi-strand fences are usually less prone to problems with green vegetation growing into the fence over time.
- More prone to installation errors.

Semi-Permanent

- Multi-Strand

Permanent

- 3D Anti-Deer Fence

(below) Scent caps with apple scent encourage deer to "test" (touch) an electric fence so they'll decide not to jump it. Cap shown is on a 3D Anti-Deer Fence.
