

6-Port Elbow Feeder #540120

How to assemble

1. Remove locking collar from elbow.
2. Insert elbow into port until flush with feeder wall.
3. Partially thread collar onto elbow, make sure the flange faces the wall.
4. Orient elbow downward to prevent feed flowing into the elbow from above.
5. Tighten collar, repeat for remaining elbows.
6. Fill feeder with desired feed. Reach into the port and swipe some feed into the feeding area to “prime” the elbow.
7. Select a bird and guide its head into the port to show it the feeder.
