

How to add the Support Rope to Premier's Deck Chair

If you raise large/heavy sheep, the supplied rope is needed to add support to the mesh. After weaving the rope through the chair, it should make a "W" shape.

Note: Orange rope (shown below) is for photo purposes only, actual support rope will be black.

Deck Chair with support rope installed.

Loop one end of the rope over a support peg at the top of the chair.

Weave the rope through the mesh to the bottom cross bar.

Wrap the rope around the bottom cross bar. Proceed to weave the rope through the mesh to the center of the top cross bar.

Wrap the rope around the top of the cross bar, then weave the rope through the mesh to the bottom cross bar. Wrap again and weave the rope back to the top cross bar.

Loop the end of the rope over the second peg at the top of the chair. The support rope is now installed on the Deck Chair.
