PARTS
a. 1 mill with hopper—shown inverted
b. 4 metal legs
c. 1 metal door
d. 4 sieves
e. 8 knobs
f. 4 large plugs for bottom legs
g. 4 small plugs for top legs

1. Install plugs into the top and bottom of legs (b). Small plugs (g) go into the top. Large plugs (f) go into the bottom.

2. With the mill set on the hopper (as shown in letter a. above). Attach the legs via the threaded knobs (e).

3. Set the grinder on its legs. Insert sieve (d) as shown. Ends of sieve fit into the slots on either side of the wheel (as shown). Sieve tube fits over the guide post beneath the wheel.

4. Place metal door (c) on hinges. Unscrew the knob (shown in inset above right). Close the door and fasten a knob into the bottom hole.

5. Take electrical control unit (ECU) and unthread knob and bolt. Thread bolt into the top hole of the door. Place ECU over the bolt and adjacent post. Thread knob onto ECU. The grinder is ready to use.

Trouble shooting:

Feed flow
Can be controlled by the yellow knob above the door. Loosen and lift on the knob. Tighten when you reach your desired feed flow.

Electrical system
Can be reset by button near the inlet power cord.

Completed assembly
