

A note regarding PAR Heat Lamp Bulbs. Items #557034 and #557035.

Dear Customer,

A customer has reported problems screwing PAR (pressed glass) heat lamp bulbs into our orange heat lamp fixtures—so we've studied this in detail.

We have concluded that, because the PAR bulbs feel so sturdy and unbreakable in the hand (which they are), some users (including myself) are inclined to screw them in with more hand strength than they use for normal heat lamp bulbs (which are fragile and feel that way).

Using too much strength to tighten the bulbs doesn't damage the bulbs—but it does deform the brass colored metal inside the ceramic fixtures of our heat lamps.

Mild deformation due to over tightening makes it difficult to screw bulbs in and out of the fixture. Major deformation due to over tightening can flatten the metal so much that the bulb can actually fall out.
