

User Guide EasyGate #340606

Assembly: Gate for electric nets

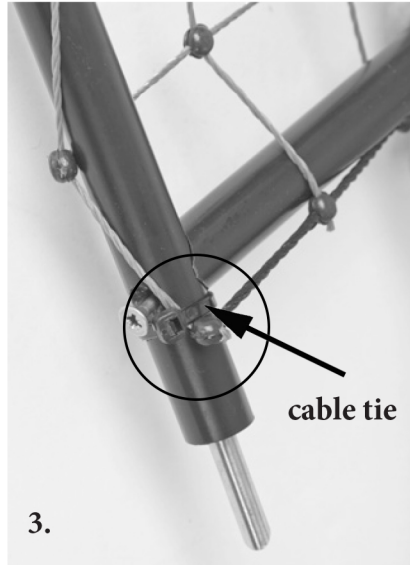

Important: When unpacking, do not cut the cable ties that secure the net to the vertical supports!
Now spread out all individual parts and check for completeness.

1. At the top and bottom of the net, thread the horizontal supports through the mesh.

2. Attach the horizontal supports using the provided screws.

3. To maintain net tension, attach the cable ties around the vertical supports below the lowest horizontal support and above the middle horizontal support.

Close-up of the horizontal supports.

4. Select the location where you want to put the gate.

This should be between the first and last post of the net, or at one end of the net.

Connect to net using the clips.
